Quick start instructions for Echoview cloud license access

Accessing your Echoview cloud license

Using an Echoview cloud license requires an initial setup process outlined below.
Following this process, a secure connection will be stored on your device. Simply starting Echoview while connected to the internet will use your Echoview cloud license without any further steps.

Before you begin:

- Confirm that the device you intend to license is connected to the internet and that Echoview has been installed
- Remove any Echoview dongles (USB licenses) from your device

Set your initial password

Once you are provided with an Echoview cloud license, click your unique link sent within an email from support@echoview.com, and follow the prompts to set up your initial password. Setting up your password only needs to be completed once. If you cannot find the expected email, please check your spam or junk mail folder.
Note: Your link will expire in 3 days

Connecting to your cloud container

On each device to be connected to your Echoview cloud license:

1. Open a web browser and navigate to https://lc.codemeter.com/94047/portal/index.php
2. Enter your *email address* and *password*, then click **Login**
   The **My Licenses** page will be displayed
3. A browser permission prompt may be shown for ***lc.codemeter.com***, select **Allow** to continue
4. Click **My CmContainers**
   The **My CmContainers** page will list all containers that you have access to
5. Click the ellipsis button (icon) displayed to the right of the listed container, and then click **Connect CmCloudContainer** (icon)
   A **Connect CmCloudContainer** progress window will be displayed and will close itself on completion.
   Note: An error message may be shown if **Allow** was not selected at the browser permission prompt. If this occurs open a new browser instance and reattempt connection.
6. Run **Echoview**
   Echoview should now be successfully licensed via your Echoview cloud license

Following successful connection, you will only need to access the **License Portal** website in the following situations:

- Your license administrator has ***reset*** the container
- The secure connection has been removed from your device
- If you would like to connect via a different device
